

Lecture 4

Epsilon (ϵ) - NFA

- $\epsilon \rightarrow$ empty symbols

$\hookrightarrow \{0, \epsilon, q_0, f, \delta\}$

only this is different.

$Q \times \Sigma \cup \emptyset \rightarrow \delta$
 \downarrow
 Q

state on
 being moving
 on empty symbol can go to q_0 .

** Every state on ϵ goes to itself

Conversion of Q-NFA \longrightarrow NFA :

Rule: (i) for each state that we have, print where this state goes on ϵ^* and so on.

All the states that can be reached from a particular state only by seeing the ϵ symbol.

$\therefore A \rightarrow B \rightarrow C$

$$\therefore (\epsilon^* \text{ of } A) = ABC$$

δ / ϵ	0	1
$\rightarrow A$	$\{A, B, C\}$	$\{B, C\}$
B	C	$\{B, C\}$
$\odot C$	C	C

(iv)

(i)

Final state will be any state that can reach
 the final state only by seeing ϵ .

\therefore A, B & C are all final state.

Ans:

non-line

	0	1
→A	B, C	φ
B	C	B, C, D
C	C	D
ⓓ	φ	φ

	ϵ^*	0	ϵ^*
ⓐ	A	B	B
ⓑ	B	φ	φ
ⓒ	C	C	C
ⓓ	D	φ	φ

	ϵ^*	1	$\epsilon, \text{ final}$
A	A	φ	
B	B	B	B
C	C	D	C
D	D	φ	φ

(3)

(1)

$$q_3 = q_2 a$$

$$\downarrow$$

$$eq(v)$$

$$\Rightarrow \underline{q_1 a (b+ab)^* a}$$

$$\downarrow$$

$$eq(v)$$

$$\boxed{q_3 \Rightarrow (a+ a(b+ab)^* b)^* a (b+ab)^* a}$$

Now all are in input a,b \therefore it is RE.
